

Hamamelis mollis

Výška	5 m
Šírka	4-5m
Koruna	round/spherical, dark, dense crown, capricious growing
Kôra a vetvy	brown, grey
Listy	green
Jesenné sfarbenie	Žltá
Kvety	golden-yellow, flowers in December
Plody	brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, peaty soil, acid soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	stromy do nádob, malé záhrady, dvory
Tvar	Vysokokmeň, Vetvený, Viackmeň

Large, broad shrub up to 5 m tall, with dense, rather tangled branches. The young twigs are grey-brown with soft hairs. The obovate to round leaf is matt green and bears soft hairs. In the autumn it turns yellow. The leaf measures 10 to 13 cm. The flowers grow in compact clusters of axillary racemes. The individual flowers measure up to about 4 cm and consist of 4 narrow, golden yellow petals and a brownish red calyx. They open from December and into January. Seeds were sent from China to Britain in 1879, but it took 20 years before the qualities of this species were discerned.
