

Hippophae rhamnoides 'Hergo'

Áno

Výška	2-4 m
Šírka	2-4m
Koruna	broad vase-shaped, dark, dense crown, capricious growing
Kôra a vetvy	grey
Listy	green, greygreen
Jesenné sfarbenie	Žltá
Kvety	yellow
Plody	yellow, orange
Trne	Áno
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, nutrient-poor soil
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, pobrežné zóny, malé záhrady, dvory

'Hergo' grows into a sturdy shrub or small tree with a broad oval crown and slightly arching twigs. It is a fairly strong-growing cultivar with somewhat more regular branching and therefore a more regular shape than the species *H. rhamnoides*. The twigs are relatively thin and not very densely covered with thorns. 'Hergo' is a female cultivar whose bright orange fruits ripen around the beginning of September. The fruits are ovoid to short cylindrical.

The fruit stalks are not very strong and the fruits are relatively loose on the branches. According to German research, this makes 'Hergo' the best cultivar for harvesting fruit by machine. This also makes this cultivar suitable for large-scale buckthorn fruiting. To produce fruit, pollination by a male cultivar ('Pollmix') must take place. Hardiness zone 4.
