

## Ilex aquifolium 'Pyramidalis'

Výška	7-9 m
Šírka	4-5m
Koruna	narrow conical, dark, dense crown
Kôra a vetvy	brown, green
Listy	evergreen
Kvety	white, flowers in May
Plody	red
Tríne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	loamy soil, sandy soil, peaty soil, nutrient-poor soil, acid soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné vetru
Stromy pre zvieratá a hmyz	Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, pobrežné zóny, malé záhrady, dvory
Tvar	Vysokokmeň

Grows from a shrub into a small or medium-size tree with a very densely branching, narrow pyramidal, later broader crown. The leaves are dark olive green and smooth-edged, or with few small spikes on the upper half of the lamina. The flowers are small and inconspicuous. In principle the flowers are female, but in practice they are self-pollinating. The flowers are followed by numerous glossy red berries from 8 to 10 mm across. Prefers a humic, moist but well-drained soil and tolerates either acidic or calcareous soil. Also an excellent hedge plant.
