

Juglans regia 'Broadview'

Výška	15-20 m
Šírka	15-20m
Koruna	round/spherical, half-open crown
Kôra a vetvy	grey
Listy	green, feathered leaf
Kvety	green, flowers in May
Plody	edible fruits, brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň, Ovocný strom vysokokmeň

Juglans regia 'Broadview' is slower growing than the species and remains smaller. Height approx. 15 - 20 m. Suitable for smaller gardens. The shape of the crown, the trunk, the branches and leaves are identical to those of the species. After the emergence of the leaves the male and female flowers appear. They do not appear simultaneously. For this reason it is recommended that another cultivar, e.g. 'Buccaneer', should be planted close by to act as a pollinator. However fructification can be apomictic whereby solitary trees can also produce a reasonable quantity of fruit. Winter hardiness zone: 5b
