

Juglans regia 'Coenen'

Výška	10-15 m, fast growing
Šírka	8-12m
Koruna	round/spherical, half-open crown
Kôra a vetvy	grey
Listy	green, feathered leaf
Kvety	yellowgreen, flowers in May
Plody	edible fruits, brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň, Ovocný strom vysokokmeň

Juglans regia 'Coenen' is a strong, vigorous tree with a broad, loose and open crown, attaining a height of 20 - 30 m. Trunk, branches and leaves are identical to those of the species. The leaves appear early in the year, which increases the risk of damage by night frost. After the emergence of the leaves the male and female flowers appear. They appear roughly simultaneously so that pollination is possible. But for effective pollination it is recommended that another type be planted close by, e.g. J. 'Buccaneer'. Winter hardiness zone: 5b
