

## Juglans regia 'Guillot'

<b>Výška</b>	15 - 25 m
<b>Šírka</b>	15-20m
<b>Koruna</b>	round, irregular, half-open crown
<b>Kôra a vetvy</b>	branches grey-brown, bark light grey, deeply grooved
<b>Listy</b>	imparipinnate, bright green, 20 - 30 cm, with 5 - 9 (11) leaf segments, feathered leaf
<b>Kvety</b>	? pendent catkins, 6 - 8 cm, ? 2 or 3 together, May/June
<b>Plody</b>	none, sterile cultivar, fruitless cultivar
<b>Tríne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	limy, moist soil
<b>Spevnené plochy</b>	Netoleruje spevnené plochy
<b>Zóna odolnosti</b>	5b (-26,0 do -23,4 °C)
<b>Odolnosť voči vetru</b>	good
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1–6), Odolné vetru
<b>Použitie</b>	bulváre a široké ulice
<b>Tvar</b>	Vysokokmeň
<b>Pôvod</b>	Gilles Bourne, France

Large tree with rather irregular, round crown, 15 - 25 m tall. The crown is formed by heavy boughs. Mature bark light grey with deep, longitudinal grooves. The imparipinnate leaf grows 20 - 30 cm long and consists of 5 - 9, occasionally 11 leaf segments. These are ovate to oval and 8 - 12 cm long. After the leaf development, the male catkins and the smaller female flowers appear, the latter in groups of 2 or 3. The blossoms are fairly inconspicuous. The distinguishing feature of 'Guillot' is that this cultivar is sterile, so will bear no nuts. Highly suitable for use in parks, wide avenues and open verges. Roots very deeply and much prefers easily penetrable, open soil.
