

Koelreuteria paniculata 'Coral Sun'

Výška	10 m
Šírka	8-10m
Koruna	round to fan-shaped, irregular, half-open crown
Kôra a vetvy	young twigs radiant orange-red, bark grey-brown, shallow grooves
Listy	(bi-)pinnate, up to 50 cm, 7 to 9 pairs of leaf segments, yellow-green, feathered leaf
Jesenné sfarbenie	Žltá, Oranžová
Kvety	yellow, in terminal panicles, July/August
Plody	bladder-shaped, bronze coloured, about 4.5 cm, seeds black
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few soil requirements, tolerates drought
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Cenné pre motýle
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	H. Kolster, Boskoop, Netherlands, 1993

Small to medium size tree with a rather irregular round to fan-shaped crown. The young twigs are intensely radiant orange-red and the leaves are bronze coloured on emerging. The first-year twigs later turn light yellow-brown and the leaves yellow-green. The shoots forming in summer also have these striking colours. The (bi-)pinnate leaf can be up to 50 cm long. The bark of the trunk eventually becomes grey-brown with shallow grooves. The blossom and fruits are typical of the species, but 'Coral Sun' generally blossoms less than others in the species. Has few demands as to soil but prefers a sunny, sheltered position.
