

# Liquidambar styraciflua 'Slender Silhouette'

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| Výška               | 10 - 18 m                                                   |
| Šírka               | 1-2m                                                        |
| Koruna              | columnar, dark, dense crown                                 |
| Kôra a vetvy        | dark grey, grooved, no corky fissures on branches or twigs  |
| Listy               | palmately lobed, 5 lobes, glossy green, 8 - 16 cm long      |
| Kvety               | yellow-green, inconspicuous, April/May                      |
| Plody               | round, spiky capsule on long stem, 3 - 3.5 cm long          |
| Tŕne                | Žiadny                                                      |
| Jedovatosť          | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá         |
| Typ pôdy            | fertile, loamy soil                                         |
| Pôdna vlhkosť       | Vhodné do vlhkých pôd                                       |
| Spevnené plochy     | Toleruje spevnenie                                          |
| Zóna odolnosti      | 5b (-26,0 do -23,4 °C)                                      |
| Odolnosť voči vetru | moderate                                                    |
| Ostatná odolnosť    | Odolné mrazu (WH 1-6)                                       |
| Použitie            | bulváre a široké ulice, úzke ulice, malé záhrady, dvory     |
| Tvar                | Vysokokmeň, Vetvený, Viackmeň                               |
| Pôvod               | Don Shadow, Shadow Nursery, Winchester, TN, USA, circa 2000 |
| Synonymum           | Liquidambar styraciflua 'Fastigiata'                        |

Medium-size to large tree with a columnar crown, remaining slender even when mature. At an estimated age of 30 years, the original tree was only about 3 m wide. The boughs grow straight up and the thinner twigs also grow vertically. They have no corky fissures. The inconspicuous flowers are followed by spiky capsules that persist in the winter. In the 1980's, Don Shadow found a mature tree growing wild at the side of a small lake in a nature reserve. The original tree was cut down around 2007, according to Shadow "by a man who wanted somewhere to put his fishing basket." Suitable for use in parks, avenues and streets. Prefers fertile, moist soil; cannot tolerate persisting drought.
