

Liriodendron tulipifera

'Aureomarginatum'

Výška	20 - 25 (35) m
Šírka	10-15m
Koruna	oval, half-open crown
Kôra a vetvy	light grey bark, branches reddish-brown
Listy	4-lobed, green with yellow edge, 8 - 15 cm long, 9 - 18 cm wide
Jesenné sfarbenie	Žltá
Kvety	tulip-shaped, green with yellow and orange, June/July
Plody	conical fruits up to 10 cm long
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	humid and rich
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vysokokmeň, Vetvený
Pôvod	Germany, 1865

This cultivar grows more slowly than the species and has a narrower crown that later widens. The trunk is grey and, when older, develops shallow grooves; the young twigs are greenish-grey, later reddish-brown. The leaves are 4-lobed and the top is straight to incised with a shallow V. Each leaf has a wide greenish-yellow edge that turns light green in the course of the summer. The leaves have a bluish-green underside and they turn yellow in the autumn. The flowers appear after the emergence of the leaves. They have a green exterior and a yellow plus orange interior. They are approx. 4 cm long and 6 cm broad. The conical fruit consists of many winged nutlets pressed together in a spiral. Deep loose soil is required because of the deeply penetrating fleshy taproot.
