

Magnolia acuminata

Výška	20 - 25 (30) m
Šírka	10-15m
Koruna	pyramidal to spreading ovoid, half-open crown, capricious growing
Kôra a vetvy	grey bark, shallow furrowed, branches brown
Listy	(wide) oval, dark green, 10 - 25 cm
Kvety	yellow green, Ø 6 - 8 cm, June/July, fragrant flowers
Plody	brown red to pink red, 5 - 8 cm, seeds bright red
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, except alkaline soils
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Tvar	Vysokokmeň, Viackmeň
Pôvod	eastern part of the United States

In the wild this tree grows in the eastern part of the United States where it grows from a shrub into a multiple-stemmed tree with a loose crown. The smooth, grey bark has shallow furrows. The young twigs are light to red brown and at first they are softly hairy. The large, shiny leaf is smooth underneath, young foliage is hairy underneath. The, for a magnolia inconspicuous, tulip-shaped flowers on short, thick flower stalks are faintly fragrant. After the flowering short-stalked, oblong, thick fruits appear. These have the shape of small cucumbers but appear, due to incomplete pollination, only in small numbers. Inside the fruits there are bright-red seeds. The fleshy roots grow both shallow and deep. In earlier times troughs were often shaped from Magnolia acuminata's straight trunk. The light wood was also used for inlays in decorative furniture.
