

Magnolia ×soulangeana

'Alexandrina'

Výška	6-8 m
Šírka	6-9m
Koruna	broad vase-shaped, half-open crown, capricious growing
Kôra a vetvy	brown, grey
Listy	green
Kvety	whitepink, flowers in April
Plody	red, roze
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, peaty soil, acid soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Viackmeň

'Alexandrina' is a fine cultivar of the well-known M. ×soulangeana. The tree grows distinctly upright and becomes medium-sized with a height of 6-9 m with a broad oval, later almost round crown. The tree does not flower very abundantly at a young age, but more than makes up for this later. 'Alexandrina' was named in 1831 by the French nurseryman Cels from Montrouge, now a district in Paris, France. Over the years, several clones under the name 'Alexandrina' have entered the market. In the clone grown in Europe, the flowers open in April and early May. They have the typical upright, tulip shape of M. ×soulangeana. The flowers are white, becoming darker purple-red towards the base. The tree is very suitable as a park tree or in larger gardens. Hardiness zone 6b.
