'Bella' is a good-growing, small to medium-sized tree growing 8-10 m tall. Whereas the species *P. persica* tends to have an irregularly shaped crown, this is much less the case with 'Bella'. This is caused by the well-through heart branch. The twigs and older bark have the same beautiful colours as *P. persica*. The foliage turns deep red in spring. In summer it is a glossy dark green and already towards the end of the summer it starts to turn red again, before turning deep purple to purple in autumn. The flowering too is like *P. persica*. In itself not spectacular, but because the tree already flowers in February-March, i.e. before the leaves develop, the red flower bundles do stand out.
