

Phellodendron amurense var. lavallei

Výška	7 - 10 (15) m
Šírka	8-10m
Koruna	fan-shaped to broad fan-shaped, half-open crown, capricious growing
Kôra a vetvy	twigs reddish brown, bark light brown-grey, deeply grooved
Listy	imparipinnate, with 5 - 13 leaf segments, green, 20 - 35 cm, feathered leaf
Jesenné sfarbenie	Žltá
Kvety	greenish-yellow in terminal panicles, 6 - 8 cm June
Plody	round berry, black
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, preferably nutrient-rich and humic
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	moderate to good
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Plody ako potrava pre vtáctvo
Tvar	Vysokokmeň, Viackmeň
Pôvod	Central Japan
Synonymum	Phellodendron lavallei

This form of *P. amurense* grows to a medium-size eventually large tree. The crown is somewhat narrower and more regular in shape than *P. amurense*. The year-old twigs are reddish brown, an older bark light brown-grey with deep cork grooves. The large imparipinnate leaves have leaf segments that vary in numbers from 5 to 13. The leaf segments are oval-elliptical to elongated and 5 to 10 cm long. The leaf is matt yellow-green on top and light green on the underside. Especially young leaves have soft hairs on the underside. The green-yellow flower panicles are 6 to 8 cm long and wide and appear in June. In autumn the leaf turns yellow first then falls early. The fleshy, shiny black berries remain on the tree throughout winter.
