

Platanus x hispanica 'Huissen'

Výška	20 - 30 m
Šírka	12-15m
Koruna	oval to broad oval, half-open crown
Kôra a vetvy	bark grey-green, scaling yellow-green
Listy	palmately lobed, yellow-green, 12 - 25 cm
Kvety	spherical heads, yellow-green, May
Plody	spherical, spiky, brown, usually in pairs
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, soil not too limy
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	moderate to good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné posypovej soli
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň
Pôvod	Huissen, the Netherlands, 1981

A tree selected at the same time as P. x hispanica 'Malburg', from an old avenue in Huissen, the Netherlands. Distinguishable from the species by relatively narrow, oval crown shape that is slightly narrower than 'Malburg'. The scaling bark, characteristic to plane trees is also found in 'Huissen'. The broad palmately lobed leaf has 3 to 5 pointed, serrated lobes and has soft hair on the underside. In summer it is yellow-green turning brownish yellow in autumn. Fallen leaves do not rot easily. The spherical floescence hangs on long stalks on which the spiky fruits later appear. These remain on the tree until well into winter. Plane trees tolerate paving very well but the shallow roots may push paving upwards. Takes pruning very well, even in old wood. Saplings require a tree stake for support and young branches break easily.
