

Prunus x eminens 'Umbraculifera'

Výška	3.5 - 5 m
Šírka	2-3m
Koruna	compact spherical, dark, dense crown
Kôra a vetvy	trunk reddish-brown, young twigs silver-grey
Listy	obovate, dark green, 3 - 5 cm
Jesenné sfarbenie	Žltá, Oranžová
Kvety	white, single, Ø approx. 1.5 cm, April
Plody	not common
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile and humid
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	fairly
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Cenné pre včely (medonosné)
Použitie	bulváre a široké ulice, stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokeň
Pôvod	South-eastern Europe to Siberia
Synonymum	Prunus fruticosa 'Globosa'

Grows to become a small tree with a compact spherical crown. Depending on the site of the graft it attains a height of 3.5 - 5 m. The crown grows to approx. 1.5 - 2 m wide and at a later age has a tendency to droop somewhat. The bark turns from grey to dark reddish-brown; young twigs have a silver-grey colour. The fairly small dark green leaves are ovoid to obovate and measure 3-5 cm. In the autumn they turn bronze-red to orange-yellow. The tree produces white single flowers in April. They grow in bundles of 2 to 4. The round red fruits, measuring approx. 1 cm, do not appear very often. The tree requires fertile and humid soil.
