

Prunus armeniaca 'Tros Oranje'

Výška	4-6 m
Šírka	3-5m
Koruna	flatened spherical, half-open crown
Kôra a vetvy	brown
Listy	green
Kvety	white, pink, flowers in March
Plody	edible fruits, yellow, orange
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Cenné pre včely (medonosné)
Použitie	stromy do nádob, malé záhrady, dvory
Tvar	Vysokokmeň, Ovocný strom vysokokmeň

'Truss Orange' is an apricot tree with a semi-open, flattened spherical crown. The tree grows 4-6 m tall. The tree flowers around mid-March to early April. The flowers are very light pink to almost white. The apricots are relatively small, making them easier to ripen in the temperate and maritime climate of north-western Europe. The fruits ripen in August and can be used both for direct consumption and for storage. The smaller fruit size makes apricots very suitable for storage. The skin is deep yellow to light orange and the flesh is firm and tastes pleasantly sweet. 'Truss Orange' is a self-pollinating variety and generally produces a lot of fruit, which also makes it popular with consumers. Cross-pollination with other trees will only enhance production. Hardiness zone 6a.
