

Prunus avium 'Plena'

Výška	8 - 12 m
Šírka	8-10m
Koruna	round, half-open crown
Kôra a vetvy	bark glossy brownish-red
Listy	ovoid, dark green, 6 - 15 cm
Jesenné sfarbenie	Žltá, Oranžová
Kvety	white, double, late April/early May
Plody	none, fruitless cultivar
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	calcareous, fertile, sandy soil
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	fairly
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre včely (medonosné)
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	France, 1700

This medium-sized tree has a rounded and regularly branched closed crown. It can eventually attain a height of 8 - 12 m and has a deeply penetrating taproot with very strongly developed lateral roots. The glossy bark is brownish-red. The ovoid dark green leaves attain a size of 15 cm and turn orange-yellow in the autumn. The leaves have an irregularly serrated edge. The tree produces bundles of white double flowers. These are 2-3 cm in size and emerge in late April to early May. 'Plena' is sterile and therefore produces no fruit. It is mainly used as a park and avenue tree. In order to be able to grow well the tree requires humid, fertile, sandy soil. Preferably calcareous.
