'Beni-chi-dori' is a slow-growing sturdy shrub to small tree that can eventually reach 5-7 m in height. The crown is round to flattened spherical in later life. Fresh green leaves hang from the dark brown twigs. These are broad oval to almost round, have a long pointed tip and a double serrated leaf edge. Depending on winter cold, 'Beni-chi-dori' flowers in February-March. The single flowers, which are in pairs or alone, are 2-2.5 cm in size and consist of 6-8 petals. They are warm dark pink-red and colour very well with the dark brown twigs. 'Beni-chi-dori' is of Japanese origin. Its exact origin is not known, but the plant was imported into England before 1961. The tree is best planted in a slightly (from north and east winds) sheltered location. Hardiness zone 6b.
