

## Pterocarya fraxinifolia var. dumosa

Výška	7 - 10 m
Šírka	7-10m
Koruna	flattened spherical to rounded, dark, dense crown
Kôra a vetvy	grey, deeply grooved, twigs greenish-brown
Listy	pinnate, fresh green, 11 - 17 leaflets, 25 - 30 cm long, feathered leaf
Kvety	pendulous ? and ? catkins, green, approx. 8 - 15 cm, April/May
Plody	nutlets in pendulous fruit catkins, approx. 30 - 45 cm
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile and moisturous
Pôdna vlhkosť	Vhodné do vlhkých pôd, Odolné voči dlhodobému zaplaveniu
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	moderate to good, cannot take sea wind
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Tvar	Vysokokmeň
Pôvod	Caucasus, Northern Iran

A cultivar that remains considerably smaller than the species. Usually grows branches low down and forms a dense crown with several heavy main branches. Often planted as a rough shrub. Maximum height up to approx. 10 m. Because of the low branching and widely spreading lateral branches old specimens are often broader than they are tall. Old trunks are dark grey and deeply grooved. The hairless leaf buds are on short stems. Young emerging leaves are yellowish-green and can be damaged by a late night frost. The pinnate leaves are smaller than those of the species and consist of fewer leaflets grouped more closely together. These too remain smaller: 4 - 7 cm. Prefers moist soils and is resistant to long-lasting flooding. When the root system is healthy the tree also grows in drier places. Cannot take sea wind.
