

Pterocarya rhoifolia KYOTO CONVENTION ('Bokravention')

| | |
|----------------------------|--|
| Výška | 15 m, fast growing |
| Šírka | 10-12m |
| Koruna | pyramidal, dark, dense crown |
| Kôra a vetvy | twigs brown, bark grey-brown, slightly grooved |
| Listy | imparipinnate with 11 - 19 leaf segments, 20 - 35 cm, leaf segments fresh green, elongated-oval, 6 - 12 cm, feathered leaf |
| Kvety | pendent ? and ? catkins, green, April/May |
| Plody | winged nutlets in pendent racemes, 20 - 30 cm |
| Tárne | Žiadny |
| Jedovatosť | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá |
| Typ pôdy | fertile and moist |
| Spevnené plochy | Toleruje čiastočné spevnenie |
| Zóna odolnosti | 6 (-23,3 do -17,8 °C) |
| Odolnosť voči vetru | moderate to good |
| Ostatná odolnosť | Odolné mrazu (WH 1-6) |
| Použitie | bulváre a široké ulice |
| Tvar | Vysokokmeň |
| Pôvod | Mart Brugel Tree Nursery BV, Oudenbosch, the Netherlands, 1999 |
| Synonymum | Pterocarya rhoifolia 'Kyoto Convention' |

Unlike the round crowns of other species, *P. rhoifolia* naturally has a broad pyramidal crown shape. 'Kyoto Convention' has a narrower crown than the species and attains a height of approx. 15 m. The crown is dense and has a great mass of leaves so it captures a lot of CO₂. The older bark is only slightly grooved and *P. rhoifolia* has bud scales, which again is unlike other species. They are light grey and already drop off in late winter. The pinnate leaves are fresh green and consist of many leaf segments. The male and female flowers appear in pendent green catkins. They are followed by long racemes of small winged nutlets that start off green, turning brown later. Forms very few or no root suckers. Requires fertile, moist soil. Good tree for use in avenues, streets and industrial areas.
