

Pyrus regelii

Výška	5 - 8 (9) m
Šírka	4-7m
Koruna	ovoid to rounded, open, half-open crown, capricious growing
Kôra a vetvy	dark greyish brown, young shoots are grey, velvety and thorny
Listy	variable, usually oval to elongated, dark green, 2 - 6 cm
Jesenné sfarbenie	Žltá
Kvety	in umbels, pure white, Ø 2.5 - 3 cm, April/May
Plody	small pears, 2 - 3 cm long, greenish yellow
Trne	Áno
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	places little demands
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	pobrežné zóny, priemyselné oblasti, malé záhrady
Tvar	Vysokokmeň
Pôvod	South-eastern Kazakhstan

Rare wild pear that naturally occurs in south-eastern Kazakhstan (Turkistan). The crown is ovoid to rounded. Young twigs have white velvety hair and stay this way into the winter. Two-year-old twigs are purplish brown and thorny. The trunk is dark greyish brown; leaves are variably shaped. The leaves are usually oval to elongated with a slightly serrated edge. They can also have 3 – 7 sometimes deep lobes that are irregular crenated to serrated. The bright white flowers bloom in small umbels, with a diameter of 2 - 3 cm. Small yellowish green pears follow in the late summer. *Pyrus regelii* generally produces ample fruit, making it less suitable for planting along streets and avenues. It is better for use as a solitary tree in parks and gardens. Places little demands on the soil. Tolerates paving. *Pyrus regelii* is an uncommon pear tree with twigs covered with a grey felt-like layer. This is a remarkable characteristic especially in the winter.
