

Quercus ×hispanica 'Ambrozyana'

Výška	5-6 m
Šírka	5-6m
Koruna	round/spherical, half-open crown
Kôra a vetvy	grey
Listy	evergreen
Kvety	light yellow, flowers in May
Plody	brown, little
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, calcareous soil
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru, Odolné posypovej soli
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Vetvený, Viackmeň
Synonymum	Quercus cerris 'Ambrozyana'

Small tree with round crown, to about 6 m. This tree was also described as a cultivar of *Q. cerris* because of the much closer similarity between the leaves. The glossy, dark green leaves are 7 to 9 cm long with a thin point on each lobe. Depending on the climate of the site, the leaves are evergreen to semi-evergreen. During severe cold, the leaves turn brown in the winter, only falling when the new leaves emerge. A healthy, warmth-loving tree which prefers a limy soil. Its Central-European origin means it tolerates our winters better than other *Quercus hispanica* cultivars.
