

Quercus ×hispanica 'Diversifolia'

Výška	5-8 m
Šírka	5-8m
Koruna	flatened spherical, half-open crown
Kôra a vetvy	grey
Listy	evergreen
Kvety	light yellow, flowers in April
Plody	brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, calcareous soil
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7 (-17,7 do -12,3 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru, Odolné posypovej soli
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Vetvený

Semi-evergreen to full evergreen tree, 5 to 8 m tall, with a round to flat-topped spherical crown. The thick bark is dark grey, deeply grooved and highly corky. The ovate leaves have a very variable margin. A characteristic of this cultivar is that the leaves have a half-moon shaped dissection in the middle. There may be several small lobes above and below this dissection. Fruit is the same as the species. During severe cold, the leaves turn brown in the winter, only falling when the new leaves emerge. A healthy, warmth-loving tree which prefers a limy soil.
