

Quercus ×schochiana

Výška	10 - 15 m
Šírka	10-15m
Koruna	round, half-open crown
Kôra a vetvy	grey
Listy	green
Jesenné sfarbenie	Žltá, Oranžová, Červená
Kvety	golden-yellow, flowers in May
Plody	brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, peaty soil
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vysokokmeň

This hybrid between *Q. palustris* and *Q. phellos* grows into a medium-sized to large tree. The open crown is round and reaches a height of 10 to 15 m, sometimes slightly higher. The lanceolate leaves are very variably lobed. In the same tree, both entire leaves and lobed leaves can be present. The lobed leaves have 1 to 4 forward-pointing pointed lobes on each side. They are a glossy dark green. The approximately 1 cm large ovoid acorns are up to one third enclosed by the cup, which is covered with adjacent scales. This hybrid was first found in cultivation in Germany, at the end of the 19th century. Later, plants of this hybrid were also found in places where the natural range of both parent species overlapped. There are several hybrids of *Q. palustris* and *Q. phellos* in circulation.
