

Quercus ilex

Výška	20 - 25 m
Šírka	12-15m
Koruna	broad ovoid, dark, dense crown, capricious growing
Kôra a vetvy	fine grooves, young twigs olive-green
Listy	obovate, deeply lobed, dark green, 10 - 20 cm, evergreen
Kvety	gold coloured ? catkins, 7 - 10 cm long, May
Plody	ovoid acorns, 1 - 2 cm, 2 to 5 grouped together
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutritious, preferably loamy
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	8a (-12,2 do -9,5 °C)
Odolnosť voči vetru	resistant to sea wind
Ostatná odolnosť	Odolné posypovej soli
Stromy pre zvieratá a hmyz	Odolné posypovej soli, Cenné pre motýle
Použitie	stromy do nádob, strešné záhrady, pobrežné zóny, priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	NAKB selection, Ede, Netherlands, 1979

A selection with a steeper and more uniform manner of growth. Fairly fast-growing, with low branches that stand at an angle of 45°. The short trunk is greyish-brown and has fine grooves. Parts of the bark flake off in platelets. Young twigs are thick, hairy and olive-green. Older twigs are bare and grey. The obovate leaves are deeply and regularly lobed. The large lobes are also lobed or carry blunt serrations. The leaves are glossy dark green, the underside lighter. They are 10 - 20 cm long, sometimes longer when the tree grows vigorously. Width 7 - 12 cm. The acorns are one third to a half enclosed by the cupule; the latter is densely covered with narrow, contiguous, hairy scales. The cupules and the leaves are very characteristic of the species.
