

Quercus ithaburensis

Výška	6 - 15 m
Šírka	6-15m
Koruna	broad oval, half-open crown
Kôra a vetvy	dark greyish-brown, deeply grooved
Listy	elongated, oval or almost round, dull green, 6 - 12 cm
Kvety	pale yellow ? catkins, May
Plody	elliptical to oval acorns
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	makes few demands, preferably not too wet
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7 (-17,7 do -12,3 °C)
Odolnosť voči vetru	fairly
Ostatná odolnosť	Odolné posypovej soli
Použitie	priemyselné oblasti
Pôvod	the south-west of Asia

A rare semi-evergreen tree with a crown that starts off oval and is later broad oval. The old bark is dark greyish-brown and has remarkably deep grooves. The dull green leaves are sometimes elongated but can also be oval or practically round. They are usually heart-shaped at the base, giving them a characteristic violin-like shape. They are 6 - 12 cm long and the edge has a few pointed serrations. The acorns are remarkably large, approx. 4 cm in size. They are elliptical to oval and half (or even a little more) enclosed by the cupule; the latter is densely covered with remarkably woody, backward-bending scales. This distinguishes this species from the equally little known *Q. macrolepis* that has much softer and hairier scales on the cupule. *Q. ithaburensis* could be used more frequently because of its remarkable leaves and fruit.
