

Quercus palustris 'Pendula'

Výška	20 m
Šírka	10-15m
Koruna	round to broad weeping, half-open crown
Kôra a vetvy	twigs olive green, bark grey, smooth to shallow grooved
Listy	ovate to broad elliptical, roughly lobed, glossy dark green, 7 - 15 cm
Jesenné sfarbenie	Červená
Kvety	golden coloured ? catkins, May
Plody	flat-topped spherical, approx. 1 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, preferably fertile, not too limy
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Použitie	priemyselné oblasti
Tvar	Vysokokmeň

‘Pendula’ has a round to broad weeping, somewhat irregular crown because of the more drooping branches. Eventually the tree can grow to around 20 m tall and wide. Fairly open branched with olive green young twigs, older branches and bark grey and smooth to shallow grooved. The ovate to broad elliptical leaf is lobed to around halfway along the leaf blade. It is glossy dark green, turning red to reddish brown in autumn. An old cultivar that is still rare in culture. The drooping branches make it a typical park tree. Grows in almost any soil and can also cope with a moist soil. Can tolerate air pollution.
