

Quercus pyrenaica

Výška	10 - 15 m
Šírka	10-15m
Koruna	ovoid to vase-shaped, half-open crown
Kôra a vetvy	grey, grooved, thin pendulous twigs
Listy	obovate to elongated, green, 10 - 18 cm
Kvety	gold-coloured ? catkins, May
Plody	elongated ovoid acorns, in bundles of 2 to 5, Ø 1,5 – 2.5 cm
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	calcareous, loamy sandy soils
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli, Cenné pre motýle
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	southern Europe, Morocco

In southern Europe and Morocco this tree grows into a bushy shrub to small tree with a twisted trunk and low branches. Often grown in the cultivated state as a small single-trunked tree. The crown is half-open and irregular in shape. Young twigs are grey and downy, later smooth and olive-green. They are thin and pendulous. The leaves vary in size: 10 - 18 cm long and 3.5 - 10 cm wide. Both sides are yellowish-grey and covered with felt-like hairs. The hairs are retained on the underside. The leaf edge is deeply pinnately incised and the lobes have blunt serrations. The acorns are grouped in twos and fours and are elongated ovoid. They are half enclosed in the cupule, the latter being covered with long contiguous scales bearing felt-like hairs. This is a tree for a warm, sunny, sheltered site.
