

## Quercus pyrenaica 'Pendula'

<b>Výška</b>	6 - 10 m
<b>Šírka</b>	5-9m
<b>Koruna</b>	broad weeping, half-open crown
<b>Kôra a vetvy</b>	grey, grooved, thin pendulous twigs
<b>Listy</b>	obovate to elongated, green, 10 - 18 cm
<b>Kvety</b>	gold-coloured ? catkins, late June
<b>Plody</b>	elongated ovoid acorns, in bundles of 2 to 5, Ø 1.5 - 2.5 cm
<b>Trne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	calcareous, loamy sandy soils
<b>Pôdna vlhkosť</b>	Vhodné do vlhkých pôd
<b>Spevnené plochy</b>	Netoleruje spevnené plochy
<b>Zóna odolnosti</b>	6b (-20,5 do -17,8 °C)
<b>Odolnosť voči vetru</b>	moderate
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1–6), Odolné posypovej soli
<b>Použitie</b>	priemyselné oblasti
<b>Tvar</b>	Vysokokmeň, Viackmeň
<b>Pôvod</b>	Netherlands, 1876

This weeping variety of *Q. pyrenaica* grows to be a broad tree with very pendulous branches. The crown is half-open. The thin twigs are grey and downy, later smooth and olive-green. The leaves vary in size: 10 - 18 cm long and 3.5 - 10 cm wide. They are covered with yellowish-green felt-like hairs on both sides. The underside remains hairy. The lobes are narrower than those of the species and mostly very deeply incised. The leaves are a somewhat paler green than those of the species. The elongated ovoid acorns are grouped in twos and fours and are half enclosed by the cupule; the latter is covered with long contiguous scales that carry felt-like hairs. Some believe that 'Pendula' is a natural variety and wild populations of *Q. pyrenaica* do include trees with an emphatic weeping shape.
