Quercus robur 'Concordia' is a cultivar that remains relatively small, reaching a height of 6 - 8 m. The tree has wide-spreading branches and an irregular round crown. The leaves are similar to those of the species but emerge in the spring a remarkable colour of yellow. They remain golden-yellow the entire summer. 'Concordia' is a very beautiful tree that can be used to contrast with green trees. Quite frequently it is planted in parks together with 'Pupurea'. Winter hardiness zone: 5a
