

Quercus robur 'Pendula'

Výška	10 - 15 (20) m
Šírka	10-15m
Koruna	broad weeping, half-open crown
Kôra a vetvy	dark grey, deep grooves, twigs reddish-brown
Listy	obovate, lobed, green, 5 - 14 cm
Kvety	greenish-yellow catkins, 2 - 4 cm long, May
Plody	ovoid to oval acorn, 1.5-2.5 cm, in groups of 2 to 6
Tŕne	žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutritious and moist
Pôdná vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru, Odolné posypovej soli
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Viackemeň
Pôvod	England, 1788
Synonymum	Quercus robur var. dauvessii

Ornamental weeping form attaining 10-15 (20) m in height and 7 - 15 m in breadth. The branches grow somewhat away from the trunk and the twigs are very pendulous. They sometimes grow 2 m in length per year and touch the ground. The bark is dark grey, later grooved. Young twigs are reddish-brown. The variable leaves are obovate to elongated oval, 5 - 14 cm long and 4 - 8 cm wide, with 3 to 5 pairs of blunt lobes. The foliage is often densely grouped at the end of the twigs. The leaves emerge brownish-red in the spring. They do not remain on the tree for long in the winter, which produces a pronounced winter silhouette. The ovoid acorns are grouped in twos to sixes and are a maximum of one-third enclosed in the cupule; the latter is covered with small, triangular, contiguous scales. Very suitable as an arbour tree.
