

Quercus robur 'Purpurascens'

Výška	15 m
Šírka	10-12m
Koruna	round, half-open crown
Kôra a vetvy	dark grey, deep grooves, twigs reddish-brown
Listy	obovate, lobed, dark purplish-brown, 5 - 14 cm
Kvety	greenish-yellow ? catkins, 2 - 4 cm long, May
Plody	ovoid to oval acorn, 1.5 - 2.5 cm, in groups of 2 to 6
Térne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutritious and moist
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	France, 1808

Red-leaved cultivar of Q. robur with branches ascending at an angle. The crown is round, the height approx. 15 m. The trunk usually branches out low down and the bark is dark grey, with grooves in old specimens. Young twigs are reddish-brown. The variable leaves are obovate to elongated oval, 5 - 14 cm long and 4 - 8 cm wide. They have 3 to 6 pairs of blunt lobes and emerge a remarkable deep purplish-brownish-red in the spring. Later they turn dark purplish-green. The second foliage (that emerges after 21 June) is also a remarkable brownish-red. The ovoid acorns are grouped in twos to sixes and are a maximum of one-third enclosed in the cupule; the latter is covered with small, triangular, contiguous scales. 'Purpurascens' is suitable as a solitary in parks.
