

## Salix caprea

<b>Výška</b>	6 - 10 m
<b>Šírka</b>	3-5m
<b>Koruna</b>	wide ovoid, half-open crown
<b>Kôra a vetvy</b>	twigs green, bark light grey
<b>Listy</b>	broad oval to broad obovate, somewhat glossy, grey-green, 5 - 12 cm
<b>Kvety</b>	ovoid catkins, ? catkins golden yellow, ? catkins silver grey, March/April
<b>Plody</b>	catkins
<b>Tríne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	few requirements, tolerates a lot of moisture
<b>Pôdna vlhkosť</b>	Vhodné do vlhkých pôd, Odolné voči krátkodobému zaplaveniu, Odolné voči dlhodobému zaplaveniu
<b>Spevnené plochy</b>	Toleruje spevnenie
<b>Zóna odolnosti</b>	4 (-34,4 do -28,9 °C)
<b>Odolnosť voči vetru</b>	good
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1–6), Odolné vetru
<b>Stromy pre zvieratá a hmyz</b>	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
<b>Použitie</b>	stromy do nádob, strešné záhrady
<b>Tvar</b>	Vysokokmeň, Viackmeň
<b>Pôvod</b>	Europe, Asia

Small tree with somewhat variable but usually broad ovoid crown. Young trees usually have a narrow ovoid crown. The young twigs are green, sometimes slightly red and covered in short, thick hair. Older twigs are hairless. The bark remains smooth for a long time with typical, small diamond-shaped fissures. Only later does the bark develop longitudinal grooves. The leaf has felt-like hair on the underside. On the upper side the veins are slightly sunken giving the leaf a rather wrinkled surface. *S. caprea* is the earliest blossoming species. The catkins appear around late March. Male catkins consist of golden yellow stamens, the female ones are covered with a thick layer of silver-coloured hair among which the pistils are found. Easy tree which grows on almost every type of nutrient-rich but not extremely acidic soil. Tolerates slight drought and quite a lot of moisture.
