

## Sorbus intermedia

|                            |                                                                         |
|----------------------------|-------------------------------------------------------------------------|
| Výška                      | 10 - 12 (15) m                                                          |
| Šírka                      | 4-6m                                                                    |
| Koruna                     | broad ovoid to rounded, dark, dense crown                               |
| Kôra a vetvy               | bark smooth, blackish-grey, later grooved                               |
| Listy                      | oval to ovoid, lobed, dark green, 6 - 10 cm                             |
| Jesenné sfarbenie          | Žltá, Oranžová                                                          |
| Kvety                      | creamy-white, in umbels of approx. 11 cm Ø, May, fragrant flowers       |
| Plody                      | ovoid to round, orange-red, fruits up to 1.2 cm Ø                       |
| Tríne                      | Žiadny                                                                  |
| Jedovatosť                 | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                     |
| Typ pôdy                   | makes few demands, grows best on calcareous soils                       |
| Pôdna vlhkosť              | Vhodné do suchých pôd                                                   |
| Spevnené plochy            | Toleruje spevnenie                                                      |
| Zóna odolnosti             | 5a (-28,8 do -26,1 °C)                                                  |
| Odolnosť voči vetru        | good                                                                    |
| Ostatná odolnosť           | Odolné mrazu (WH 1–6), Odolné vetru                                     |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo      |
| Použitie                   | bulváre a široké ulice, stromy do nádob, strešné záhrady, pobrežné zóny |
| Tvar                       | Vysokokmeň, Viackmeň                                                    |
| Pôvod                      | Southern Scandinavia                                                    |

Medium-sized tree that starts off with a narrow pyramidal crown, later growing to broad ovoid. Old specimens eventually develop a round crown. It is a slow grower with an extended main trunk and dense branches. The blackish-grey trunk remains smooth for a long time but is later grooved. Young twigs are greyish-brown to olive-brown, hairy at first but very quickly become bare. The leaves are lobed with 5 to 9 lobes on each side. On the upper side they are dark green and slightly glossy while the underside is white and felt-like; in the autumn they turn yellow to orange-yellow. Sometimes the autumn coloration fails to appear. The creamy white flowers give off a scent that is typical of the tree. After flowering the tree produces orange-red ovoid to round fruits in small umbels. They remain on the tree until October. *S. intermedia* is a wind-resistant tree that stands up well to dry conditions. Can be used in coastal regions. Resistant to fire blight.
