

Stewartia sinensis

| | |
|-----------------------------------|--|
| Výška | 10 m |
| Šírka | 4-6m |
| Koruna | broad oval, light, open crown, capricious growing |
| Kôra a vetvy | bark, reddish brown, thin scaling reveals light brown bast |
| Listy | oval to obovate, dark green |
| Jesenné sfarbenie | Fialová |
| Kvety | white with yellow stamens, bowl-shaped, Ø 3 - 5 cm, June |
| Plody | woody capsule |
| Tríne | Žiadny |
| Jedovatosť | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá |
| Typ pôdy | moist, not too wet, peaty |
| Spevnené plochy | Netoleruje spevnené plochy |
| Zóna odolnosti | 6b (-20,5 do -17,8 °C) |
| Odolnosť voči vetru | fairly |
| Ostatná odolnosť | Odolné mrazu (WH 1–6) |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1–6), Cenné pre včely (medonosné) |
| Tvar | Vysokokmeň, Viackmeň |
| Pôvod | Central and eastern China |

Sturdy shrub to small tree with an oval crown that later spreads out. In the wild the tree can reach 20 m, but in culture it is seldom taller than approx. 10 m. The bark is attractive reddish brown and scales in thin paper-like plates revealing the light brown to sand-coloured bast. The oval to obovate leaf is dark green and turns brownish purple in autumn. The single flowers appear in abundance in the leaf axils and open in June. They are white with yellow stamens but slightly less conspicuous than other species because they remain more bowl-shaped and seem not to open fully. The blossom is followed by woody capsules that burst open at the tip into five segments. Each locule contains two seeds. Rare tree whose main ornamental value is created by the beautifully coloured bark.
