

Styrax obassia

Výška	10 - 15 m
Šírka	5-8m
Koruna	broad ovoid to round, half-open crown, capricious growing
Kôra a vetvy	twigs reddish brown, bark grey, smooth
Listy	broad oval to round, dark green, 5 - 20 cm
Kvety	in racemes, 10 - 20 cm, white with yellow stamens, approx. 2 cm, June, fragrant flowers
Plody	ovoid drupe, white to yellowish, hairy
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	light loamy and humic soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Plody ako potrava pre vtáctvo
Tvar	Vysokokmeň, Viackmeň
Pôvod	Japan, Korea, Northern China

Very large shrub or medium-size to large tree with a broad ovoid to round crown. The young twigs are reddish brown, initially hairy, later turning dark purple and hairless to slightly scaling. The bark of older trees is grey and smooth. The large leaves are almost round with a strikingly pointed tip. They are dark green. The lower two leaves of each shoot are virtually opposite each other. The other leaves are spread along the twig. The leaf base is broad, hollow and encloses the bud. The flowers open in June and hang in long racemes. The individual flowers measure approx. 2 cm and are white with yellow stamens. They have a very strong, pleasant fragrance. The tree usually blossoms very abundantly making it very bee friendly. The flowers are followed by hard, ovoid, white to yellowish hairy drupes with a dark green calyx.
