

Tilia cordata 'Böhlje'

Výška	12 - 18 m
Šírka	6-9m
Koruna	conical, later broader, dark, dense crown
Kôra a vetvy	dark brown, grooved, young twigs green, reddish-brown later
Listy	more or less round, dark green 5 to 12 cm
Jesenné sfarbenie	Žltá
Kvety	in umbels, yellow to cream-coloured, pungent, June/July, fragrant flowers
Plody	round-ovoid, Ø 0.5 – 0.8 cm, first felt-like, later bare
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, tolerates dry conditions
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	very good, also tolerates sea wind
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
Použitie	bulváre a široké ulice, úzke ulice, pobrežné zóny
Tvar	Vysokokmeň
Pôvod	Böhlje, Westerstede, Germany, late 1800
Synonymum	Tilia cordata 'Erecta', Tilia cordata 'Select'

A cultivar of *T. cordata* discovered as a seedling, which starts out with a narrow, conical, compact crown that becomes broader later. Height 12 - 18 m, width up to 12 m. The trunk is dark brown and grooved, young twigs are green to reddish brown. The dark green leaves generally have a slanted, heart-shaped base and taper to an abrupt point at the top. They are bluish green underneath and turn a remarkable yellowish colour in the autumn. Pungent flowers appear in early summer, growing 5 – 10 together in short umbels. The light green bract is somewhat shorter than the umbel. Small fruit follow in late summer. These are grey and felt-like at first and later bare. *T. cordata* and cultivars are not very prone to aphids. Its narrow manner of growth makes 'Böhlje' excellently suitable for streets and avenues.
