

Tilia henryana

Výška	9 - 15 (25) m
Šírka	6-10m
Koruna	round, half-open crown
Kôra a vetvy	grey, slightly grooved, twigs slightly hairy at first, later bare
Listy	broad ovoid to heart-shaped, emerge a bronze colour, later green, 5 - 15 cm
Kvety	in pendulous umbels, Ø 10 - 15 cm, yellowish white, July/September, round to oval , fragrant flowers
Plody	nut with 5 ribs, greyish green
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all types, preferably well-permeable
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	8 (-12,2 do -6,7 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru
Stromy pre zvieratá a hmyz	Odolné vetru, Cenné pre motýle
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	Central China

Naturally growing in central China where it grows from a shrub into an impressive tree up to 25 m high. Due to its sensitivity to frost, it is rarely cultivated in Europe and grows to a maximum height there of 15 m. T. henryana has particularly decorative leaves that are pink to a dark bronze colour when they emerge. They are covered thickly with silver-coloured, star-patterned hair and turn shiny dark green later in the season. Underneath, they are covered with downy brown hair. The leaf tapers shortly at the top and the edge is serrated with needle-shaped teeth that are developed by the lateral veins extending into the teeth. The lovely-smelling yellowish white flowers grow in pendulous umbels of 20 to 50 together. The bract has a long stem and is approx.13 cm long. T. henryana requires a warm, sheltered site.
