

Ulmus 'Camperdownii'

Výška	6 - 10 m
Šírka	6-8m
Koruna	broad weeping, dark, dense crown
Kôra a vetvy	smooth, silver-grey, later dark grey with black grooves, twigs brown
Listy	broad obovate, upper side rough, dark green, 8 - 16 cm
Kvety	in dense bundles on short stems, light green, March/April
Plody	flat winged nutlets, round to elliptical, brown
Tríe	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	moist and light, favours calcareous soils
Pôdna vlhkosť	Vhodné do vlhkých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
Tvar	Vysokokmeň
Pôvod	Camperdown House, Dundee, Scotland, 1850
Synonymum	Ulmus glabra 'Camperdownii'

Handsome weeping tree with sturdy drooping branches that often reach the ground. Forms a closed crown. Is grafted onto *U. glabra*, usually at a height of between 2 and 2.5 m. The trunk of the young tree is smooth and silver-grey; later it turns dark grey with black grooves; old trunks have a network of grooves. Young twigs are brown, slightly hairy and have lenticels; later they become bare and greyish-brown. The large leaves grow close together, which causes dense foliage to develop so that the leaves cover the entire branch. The leaves are hairy on both sides and roughly serrated; the upper side feels rough. On one side the leaf stalk is covered by the asymmetrical foot, a characteristic of elm leaves. Very thick flower buds open just before the leaves emerge. Sensitive to Dutch elm disease.
