

Ulmus 'Lobel'

Výška	15 - 18 m
Šírka	4-6m
Koruna	broad pyramidal, dark, dense crown
Kôra a vetvy	smooth, silver-grey, later with blackish-grey grooves, twigs olivegreen
Listy	obovate, dark green, 6 - 9 cm
Kvety	in dense bunches on short stems, light green, March/April
Plody	flat winged nutlets, round to elliptical, brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	moist and light, favours calcareous soils
Pôdna vlhkosť	Vhodné do vlhkých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Odolnosť voči vetru	very good, also against sea wind
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	bulváre a široké ulice, pobrežné zóny, priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	De Dorschkamp, Wageningen, Netherlands, 1973

A Dutch cultivar from a cross between two seedlings in which *U. glabra* 'Exoniensis', *U. hollandica* 'Bea Schwarz' and *U. wallichiana* (from the Himalayas) were brought together. Forms a vertically ascending tree with lateral branches growing out at an angle. In its young years it is narrow pyramidal but later becomes broad pyramidal. Breadth 4 to 5 m. It is a vigorous grower forming a very dense crown with short branches growing close together. The fairly small rough leaves are dull dark green with dense veins and a double-serrated edge. They are bronze coloured when they emerge. They remain on the tree for a long time, often until late November. The light reddish-brown leaf buds are a remarkable feature. 'Lobel' is reasonably resistant to Dutch elm disease. Because it is very resistant to sea wind it is eminently suitable for use in the coastal provinces.
