

## Viburnum burkwoodii

<b>Výška</b>	2-3 m
<b>Šírka</b>	2-3m
<b>Koruna</b>	round/spherical, half-open crown
<b>Kôra a vetvy</b>	grey
<b>Listy</b>	green
<b>Kvety</b>	white, flowers in March
<b>Plody</b>	red, black
<b>Tríne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	clay soil, loamy soil, sandy soil, calcareous soil
<b>Spevnené plochy</b>	Netoleruje spevnené plochy
<b>Zóna odolnosti</b>	6a (-23,3 do -20,6 °C)
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1-6)
<b>Stromy pre zvieratá a hmyz</b>	Odolné mrazu (WH 1-6), Plody ako potrava pre vtáctvo
<b>Použitie</b>	stromy do nádob, malé záhrady, dvory

Viburnum ×burkwoodii is a medium-sized shrub with a round crown that grows 2-3 m high and wide. The young twigs have a rough feel due to the stiff, short hairs. The older bark is grey-brown and smooth. The leaves are a glossy dark green, giving the plant a healthy appearance. V. ×burkwoodii is semi-evergreen and the leaves that fall off in winter turn deep red in autumn. In March-April the spherical corymbs appear with about 1 cm large, white flowers. The flower buds are brownish-pink to dark pink and contrast beautifully with the opened white flowers. The flowers have a very strong and pleasant fragrance. They are followed by small, elongated berry-shaped fruits that colour through red to black. V. ×burkwoodii grows in any soil, provided it is sufficiently nutritious and sufficiently permeable. The shrub is fine for use in parks and gardens, either as a solitary or in large planting beds. V. ×burkwoodii can also be used in greenbelts and as an understory under trees with transparent crowns.

V. ×burkwoodii arose from a cross between the evergreen V. utile and the deciduous V. carlesii. There are several fine cultivars in cultivation.
