

Acer circinatum

Šírka	8-10m
Jesenné sfarbenie	Žltá, Oranžová, Červená
Térne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň, Viackmeň

Usually a very large shrub, *Acer circinatum* later grows into a small tree with a spherical, later slightly flattened crown. The tree does not grow very fast, so it takes many years to reach its final height. The dull green leaves are regularly lobed, with the 7 to 9 (sometimes 11) lobes incised to about a quarter to a third of the leaf blade. In autumn, the leaves turn brilliant orange to dark red. The striking fruits are typical of *Acer*. The two wings of the seeds are always in line. They are green, but often red. *A. circinatum* is naturally a tree found in the undergrowth of Douglas-fir and Sitka spruce forests. Therefore, plant this species preferably in a slightly shaded location. Likes well-drained, deep-rooting nutritious soil, preferably humous sandy soils, loamy soils or light peaty soils. Especially on sandy soils, autumn colours will be most beautiful. Applicable as a solitary tree or in small groups in parks, gardens and wide green spaces.
