

Cryptomeria japonica 'Rasen'

Šírka	4-5m
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	malé záhrady, dvory
Tvar	Vysokokmeň, Vzorový ihličnan

In several cultivars of *C. japonica*, the needles typically grow around the twigs. The best-known cultivar with this characteristic is *Cryptomeria japonica* 'Rasen'. *Cryptomeria japonica* 'Rasen' is a fast-growing, slender-rising tree with a fairly open branch structure. The tree grows about 12 m tall. Older trees often become bare underneath. The shiny dark green needles are tightly curved around the rather long twigs, giving them a spiral appearance. It makes 'Rasen' a popular tree, not only for use in gardens and parks, but also in floral design. This ancient Japanese cultivar was introduced to Europe in 1970. Hardiness zone: 6a
