A large tree with initially a conical crown, later becoming more elongated oval to round. The bark is light grey in colour and remains smooth for a long time, and the young twigs are yellow-brown, shiny and somewhat drooping. The broad ovoid to round leaves are dark green with a lighter underside, the leaf edge is wavy to coarsely toothed. It turns yellow in autumn. Characteristically, the leaves make a rustling sound when windy. The tree is dioecious. Suitable for landscape and row plantings. In Eastern Europe and Scandinavia, *P. tremula* is valued for its good wood for matchmaking and paper industry. Little susceptible to rust and leaf spot disease, but this can vary from tree to tree. Good wind resistance.
