

Abies koreana

| | |
|-----------------------------------|--|
| Výška | 10 - 12 m, slow growing |
| Šírka | 4-6 m |
| Koruna | narrow pyramidal, dark, dense crown |
| Kôra a vetvy | bark grey with purple lustre, smooth, later peeling slightly |
| Listy | dark green needles, 1 - 2 cm, bluish white underneath, evergreen |
| Kvety | unremarkable, fragrant flowers |
| Plody | upright cones, cylindrical, violet to steel blue, autumn |
| Tárne | Žiadny |
| Jedovatosť | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá |
| Typ pôdy | all |
| Spevnené plochy | Netoleruje spevnené plochy |
| Zóna odolnosti | 6a (-23,3 do -20,6 °C) |
| Odolnosť voči vetru | good |
| Ostatná odolnosť | Odolné mrazu (WH 1–6), Odolné vetru |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo |
| Použitie | stromy do nádob, strešné záhrady |
| Tvar | Vzorový ihličnan |
| Pôvod | South Korea |

A conifer with a narrow, pyramidal shape that grows more slowly than most other *Abies* species. When young, the tree is somewhat irregularly shaped, but later it grows into a very uniform pyramid with an ultimate width of 3 - 4 m. The branches grow closely together, are yellowish grey in colour and have small buds with profuse sap. The dark green needles grow close together, almost forming a brush. *A. koreana* is lovely all year long thanks to the bluish white colour on the underside of the needles. Unlike other *Abies* species, the upright cylindrical cones are 4 - 7 cm long and about 2.5 cm wide, already when the tree is still young. At first, they are still green, but later they take on a violet to steel blue colour. There are several interesting cultivars of *A. koreana* on the market.
