

Abies veitchii

Výška	25 - 30 m
Šírka	6-8m
Koruna	narrow pyramidal, dark, dense crown
Kôra a vetvy	twigs reddish brown to brownish green, bark grey, smooth
Listy	soft needles, glossy green, with white stomatal stripes on the underside, 1.5 - 3 cm long, evergreen
Kvety	? yellow with purplish red, 1 - 1.5 cm pendent, ? green, June, fragrant flowers
Plody	narrow cylindrical cones, bluish purple, 4 - 8 cm long and 3 cm wide
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile, well-drained, neutral to light acidic
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Tvar	Vzorový ihličnan
Pôvod	Central and southern Japan

Large conifer with an upright, narrow pyramidal crown that can grow to over 25 m tall. The crown has a regular shape. Young twigs are reddish brown to brownish green and the bark is grey and smooth. The needles feel soft, they are 1.5 to 3 cm long, glossy dark green on top. On the underside of the needles two pure white stomatal stripes are visible. The needles are attached brush-like around the upper side of the twig and all point forwards. The narrow cylindrical cones are bluish purple. The species name refers to John Gould Veitch who founded the famous Veitch tree nursery. He 'discovered' this species in 1861 on Mt. Fuji, Japan. Graceful conifer with an intensely green needle colour that is suitable for parks and large gardens. Grows on any fertile, well-drained soil that is neutral to light acidic.
