

Cedrus deodara 'Aurea'

Výška	15 - 20 (30) m
Šírka	6-10m
Koruna	broad pyramidal when young, later broad, flattened, corymbose, dark, dense crown
Kôra a vetvy	first grey and smooth, later becoming rough
Listy	needles in bundles, yellow to greenish yellow, 2.5 - 5 cm , evergreen
Kvety	unremarkable, fragrant flowers
Plody	reddish brown cones, 8 - 12 cm, 1 to 2 together
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutrient-rich, well-permeable, acidic soils
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7b (-14,9 do -12,3 °C)
Odolnosť voči vetru	moderate
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vzorový ihličnan
Pôvod	England, 1866

This cultivar grows somewhat more slowly than the species and has one main trunk that grows straight with lateral branches and twigs that hang off at the end. As a result, the tree, particularly when young, develops a decorative crown shape that is at first broad and pyramidal, but later flattens out as it grows. Depending on the site of the tree, its height is 15 - 30 m. The needles grow in groups, with up to 30 bundled together. First they are yellow, but later they turn greenish yellow. The ovoid, upright cones grow singly or in pairs and have a round top. When planted, young trees are particularly sensitive to frost, requiring a site sheltered from wind. 'Aurea' likes light, but not direct sun. It is somewhat more sensitive to frost than the species and does not thrive well in high-pH soil.
