

Picea abies 'Nidiformis'

Výška	2-3 m
Šírka	3-4m
Koruna	round/spherical, dark, dense crown
Kôra a vetvy	grey
Listy	green, evergreen
Kvety	light violet, yellow, flowers in April
Plody	brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, peaty soil, acid soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	3 (-40,0 do -24,5 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vzorový ihličnan

Picea abies 'Nidiformis' is a shrubby cultivar that, after many years, can reach a height of 2 to 3 m at more than 4 m in diameter. Initially the plant has a spherical shape, later in life the crown will be more flattened to nest-like, with the centre of the plant lower than the edges of the crown. Young twigs are reddish-brown, older twigs and trunk are grey. The needles are dark green to dark blue-green. With a magnifying glass, you can see that the edges of the needles possess a number of very small teeth, the feature to distinguish 'Nidiformis'. Cones are formed only sporadically. This cultivar is very suitable for use in (small) gardens, parks, cemeteries, containers, etc. Picea abies 'Nidiformis' was found at Rulemann Grisson's nursery in Sasselheide, near Hamburg, Germany, in 1904. Hardiness zone: 3
