

Picea pungens f. glauca

Výška	30 - 40 m
Šírka	9-12m
Koruna	pyramidal, half-open crown
Kôra a vetvy	twigs yellowish brown, bark grey-brown and deeply grooved
Listy	stiff, prickly needles, blue-grey, 2 - 3 cm, evergreen
Kvety	inconspicuous
Plody	pendent cylindrical cones, 4 - 10 cm long
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, provided it is moist enough, preferably not too acidic
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti
Tvar	Vysokokmeň, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Western USA

Large tree with a pyramidal growth habit and dense, very regular branching. The bark is grey-brown, later deeply grooved. The young twigs are yellowish brown to orange-brown and go well with the blue-grey needles. These are stiff and spiky, 2 - 3 cm long. The long cylindrical cones are green first, turning yellowish brown when ripening. The forma (f.) glauca is the more or less 'blue-grey needled' form of P. pungens. Because it occurs in nature and reproduces by seeding, it is naturally quite varied. In culture, the tree is usually propagated vegetatively which means there is one clone. The tree has few demands as to soil provided it is adequately moist. A very useful conifer due to its high tolerance to dry air. Good wind tolerance.
