

## Pinus densiflora 'Umbraculifera'

Výška	2 - 4 m
Šírka	2-4m
Koruna	broad fan-shaped, dark, dense crown, capricious growing
Kôra a vetvy	twigs light brown, bark brown-grey, grooved in rectangular plates
Listy	soft needles, straight to slightly wavy, 2 together, 3 - 10 cm, mid-green, evergreen
Kvety	? in clusters by the young shoots, yellow, fragrant flowers
Plody	oval cones, 3 - 6 cm long, 2 - 3 cm wide
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, fertile, well-drained
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady
Tvar	Viackmeň, Vzorový ihličnan
Pôvod	Japan, before 1890

Small, often multi-stemmed tree with a broad fan-shaped crown. The tree grows to 4 m tall and is usually just as wide or even slightly wider. The young twigs are light brown, mature bark is brownish grey and grooved in rectangular plates. The soft needles, which are in twos or threes, are 3 - 10 cm long and mid-green. They are straight to somewhat wavy so they are often intertwined. The needles of older branches fall off, which emphasises the tree's characteristic fan shape. The oval cones stand alone or in pairs and brown-yellow when ripening. This old Japanese form was introduced in 1890 although it had been bred for much longer under the local name, "Tanyosho". Its characteristic shape means it is a useful park tree that is also suitable for small gardens. Has few demands as to soil and can tolerate wind.
